

New ECA Training Centre in Durban

We are very pleased to announce that the ECA once again has its own Training Centre in Durban. Due to numerous requests from members in KZN, it was decided to open the new training centre because we are satisfied that there is a great need for training to address the skills shortage. The centre situated in Stamford Hill Road and is less than 1 km from the Regional Office. Situated on the 3 Floor of the building directly above a popular clothing store, the unit is over 400 sqm in extent and comprises offices, lecture room, workshop area and an area which will be used as the Trade Test Centre.

We plan to offer a wide selection of electrical courses and training. These will include the apprenticeship modules 1 to 7, Elconop 2 and 3 training, COC courses (both theoretical and practical),

Installation Rules courses etc. We will also be undertaking Trade Tests A, B and C.

Resheka Sewpersadh has been appointed Regional Training Co-ordinator, and between the two of us will attend to all your training needs. In addition, at least two instructors are to be employed.

Technical queries will still be handled by myself.

All future COC courses will be held at the new premises, and we now we have the added advantage of a fully operational three phase supply. The rest of the equipment will be arriving on 24 October 2008, and the first module 1 to 3 course is planned to begin on the 3 November.

Any suggestions, comments, ideas or suitable equipment for training will be most welcome. Please contact me on the numbers below.

As the centre develops further information will be provided in future issues of Vector.
